

Aladdin series 32 wick problem

This is what I thought was part of the wick, but in better light and after some cleaning I now see it is brass and another part of the centre tube

These are the carrier to wick locking pins. Exact mirror of them at 180°

Carrier moves about 5mm up and down but wick is stuck to tube.

I have been able to insert a circle of shim brass about 15mm all around between wick and tube but it is still stuck.
